Employer Responsibilities

- ▶ California Code of Regulations specify safe work practices for employees who
 - ▶ **handle** pesticides
 - ▶ Work in **treated** fields (fieldworkers, early-entry fieldworkers)

What do you need to do?

- ▶ **Assure** decontamination facilities are **provided** to your employees.
- ▶ At the beginning of each workday, the facilities have:
 - ▶ **Soap**
 - ▶ **Water**
 - ▶ **Single-use towels**

What do you need to do?

- ▶ At least 3 gallons of water per handlers or early entry workers
- ▶ At least 1 gallon of water per fieldworker
- ▶ One clean change of coveralls available for handlers at each decontamination site.

Assure that:

- ▶ Water is of a **quality and temperature** that will not cause illness or injury when it contacts the skin or eyes, or if it is swallowed.
- ▶ Water is **stored separately** from water used for mixing pesticides—unless water-tank used for mixing is equipped with appropriate valves to prevent backflow of pesticides into the water.

Eye Wash

- ▶ If the pesticide product labeling requires protective eyewear, assure that:
 - ▶ At mix/load site, there is immediate access to **at least one system** capable of delivering gently running water at a rate of at least **0.4 gallons per minute for 15 minutes** or **6 gallons of water** in containers suitable for providing a gentle eye-flush for about 15 minutes.
 - ▶ Each **handler** or **early-entry fieldworker** has **one pint of water** for emergency eye-flushing immediately available.*

Where Do You Need to Provide These Facilities?

Handlers

- ▶ Located at the mixing/loading site and **not more than 1/4 mile** (or at the nearest point of vehicular access) from other handlers.
- ▶ **For pilots**, the decontamination facilities only need to be at the mixing/loading site.

Fieldworkers

- ▶ Located **not more than 1/4 mile** from the field-workers (or the nearest point of vehicular access).
- ▶ Not in an area under an REI unless fieldworkers are performing **early-entry** activities.
- ▶ Not in an area under treatment.

When Do You Need to Provide the Facilities?

- ▶ **Handlers** - for the duration of the handling **task** until the end of their exposure period.
- ▶ **Fieldworkers** - when working at any time in a **treated** field.
- ▶ **Early-entry** fieldworkers - when working in a treated field while any **REI** is in effect.

Service Container Labeling

3CCR 6678

3CCR 6000 Definitions: Service Container

“Service container” means any container, other than the original labeled container of a registered pesticide provided by the registrant, that is utilized to **hold**, **store**, or **transport** the pesticide or the use-dilution of the pesticide.

Title 3, California Code of Regulations, section 6678.

- ▶ **Measuring vessels** and **application equipment** are not considered to be service containers while they are in use. **HOWEVER**, they are and **must be labeled as a service container if they are used to store** or hold pesticides for a prolonged period or to transport pesticide down a public road to another site. This interpretation applies to all application equipment from backpack sprayers to tractor mounted or towed equipment.

Labeling Requirements

- ▶ Service container labeling regulation limits what can be required on the labeling to three specific items:
 - ▶ The **name** and **address** of the person or firm responsible for the container.
 - ▶ The **identity** of the pesticide in the container.
 - ▶ The word “**DANGER**”, “**WARNING**”, OR “**CAUTION**” in accordance with the label on the original container.

Prohibited Containers.

- ▶ Anything **that is not the original registrant's container** but holds the pesticide is a service container. 3 CCR section 6680 prohibits end users from using empty containers that are readily identifiable or recognizable as food or beverage containers as pesticide service containers
